The TOGAF ADM Engine

A visual playbook for Enterprise Architecture development, migration, and governance. Phases A through G.

BUSINESS VISION
(Phase A)

INFORMATION SYSTEMS
(Phase B & C)

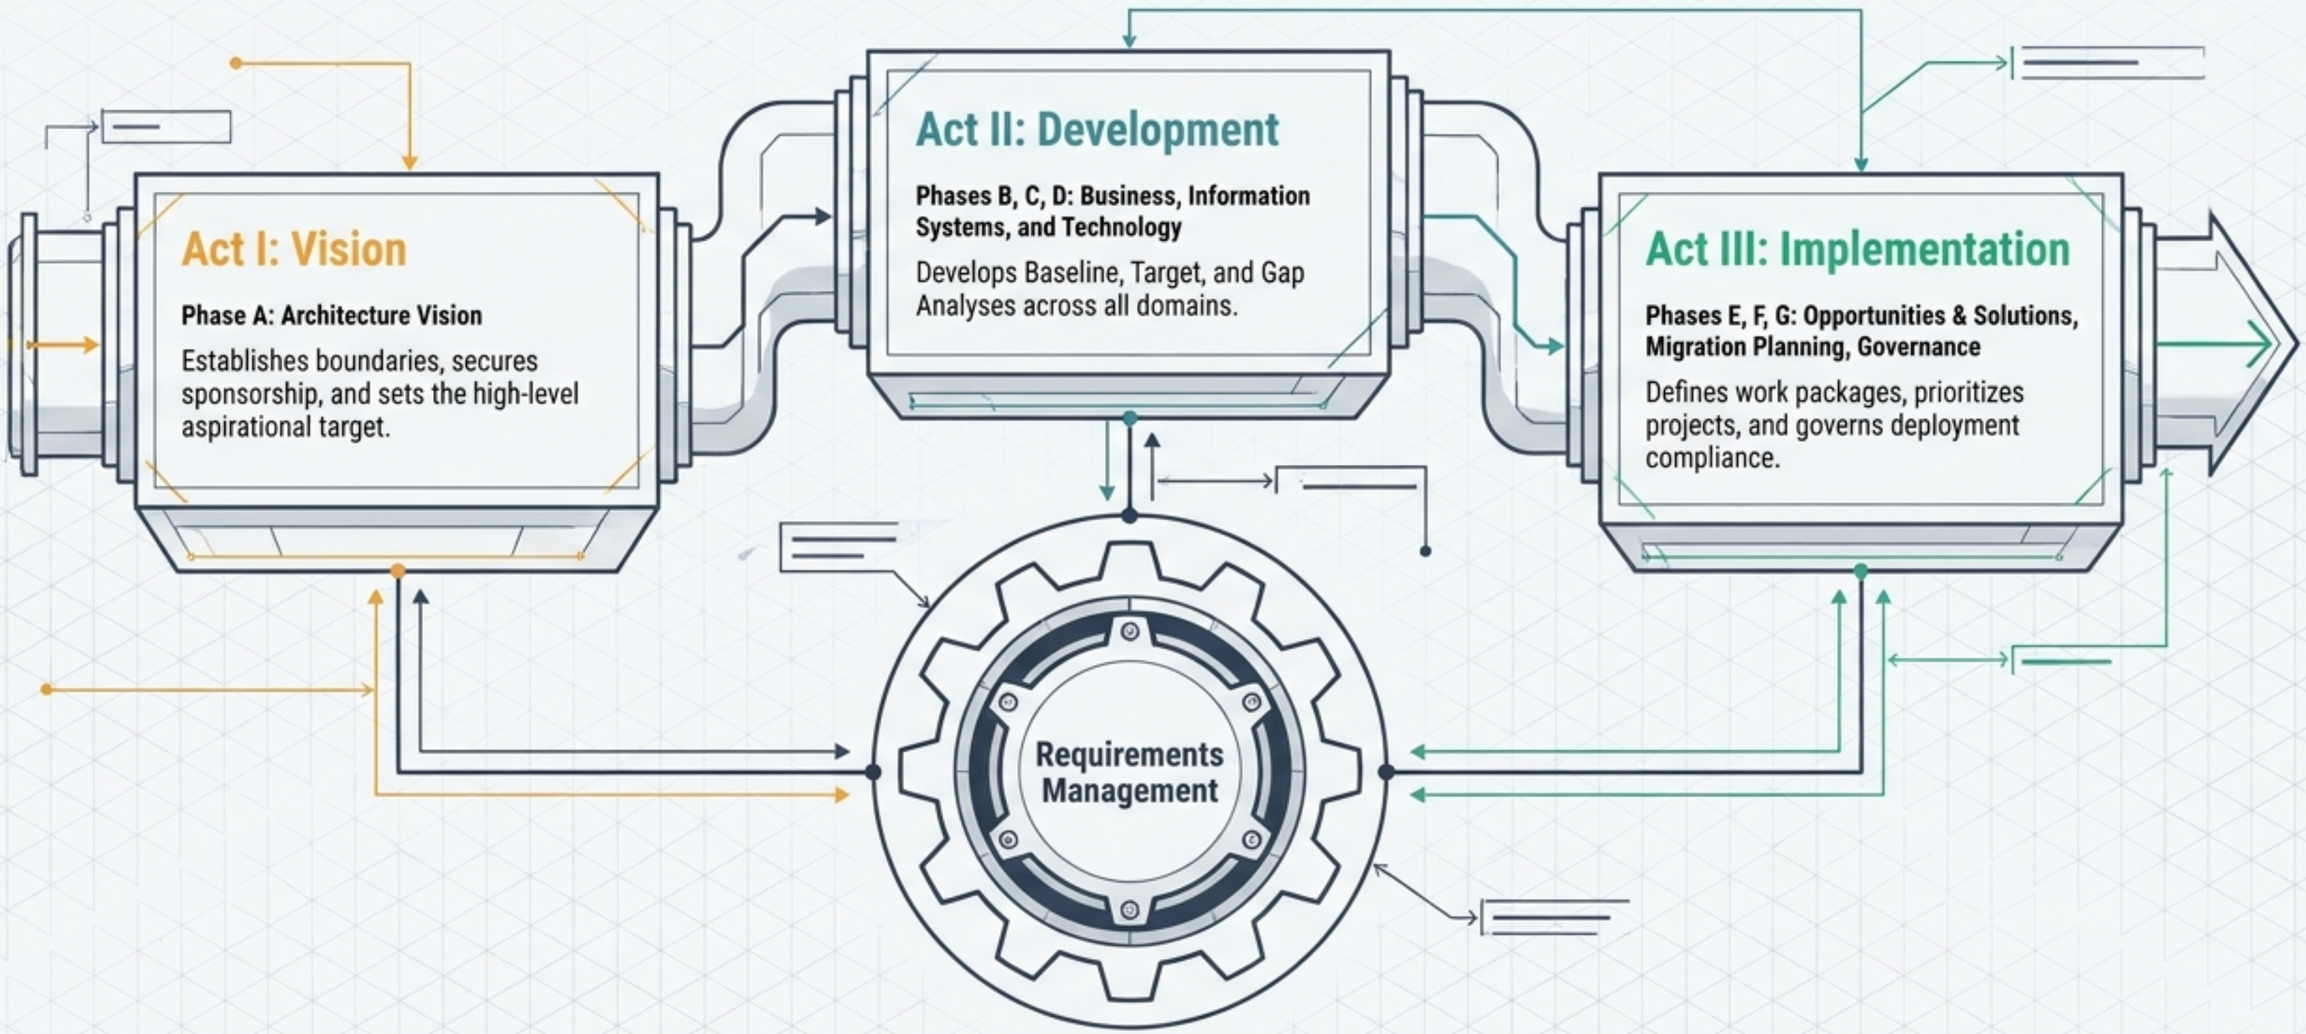

TECHNOLOGY & IMPLEMENTATION
(Phase D & E)

MIGRATION & GOVERNANCE RISK
(Phase F & G)

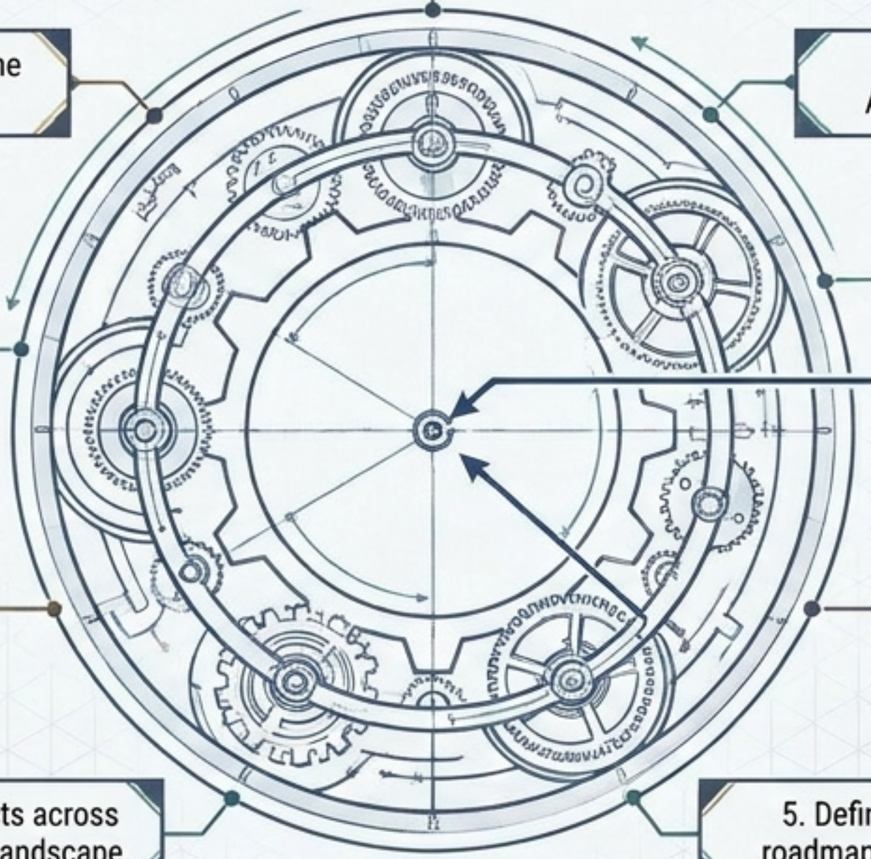

Gemini Notebook

The Architecture Transformation Lifecycle

Gemini Notebook

The Universal ADM Algorithm

1. Select reference models, viewpoints, and tools.
2. Develop Baseline Architecture Description.
3. Develop Target Architecture Description.
4. Perform gap analysis (Baseline vs. Target).
5. Define candidate roadmap components.
6. Resolve impacts across the Architecture Landscape.
7. Conduct formal stakeholder review.
8. Finalize the architecture.
9. Document and update the Architecture Repository.

Iteration, Stakeholder Engagement, and Architecture Governance apply at every single tick of this gear.

Gemini Notebook

Phase A: The Starting Gate (Architecture Vision)

Inputs:
- Request for Architecture Work
- Strategic Plans
- Business Principles

Outputs:
Approved Statement of Architecture Work
Architecture Vision

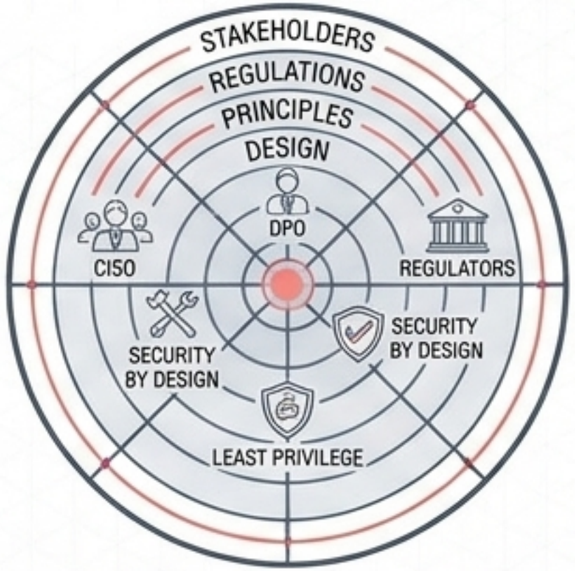

Sets the scope and boundaries, ensuring Phases B to D do not drift.
This is the contract between architects and sponsors.

Gemini Notebook

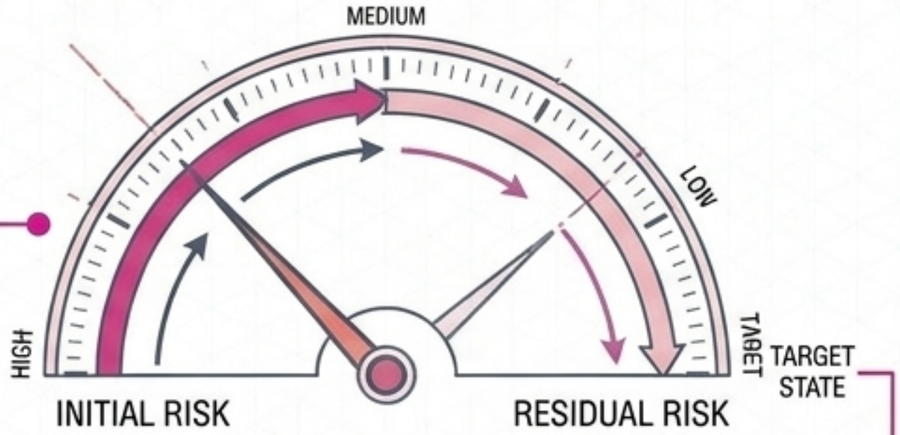

Embedding Security & Risk from Day Zero

The Security Radar

- Identify key stakeholders (CISO, Data Protection Officer, regulators).
- Capture regulatory obligations and risk appetite.
- Confirm security by design and least privilege principles before detailed design begins.

The Risk Register

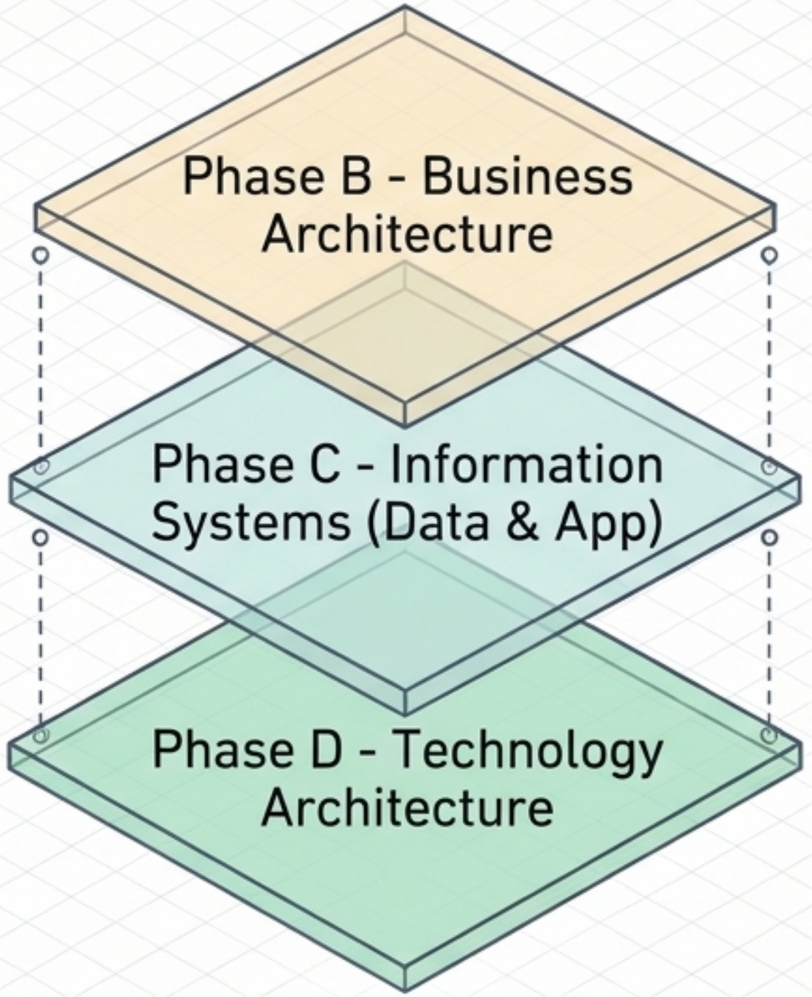

- Conduct initial business transformation risk assessment.
- Assess if existing security policies and skills are adequate for the target state.

In Phase A, security is addressed at the vision and governance level, not detailed control design. It guides B-D.

Gemini Notebook

Act II : Architecture Development

The Goal: Generate the Baseline, Target, and Gap Analysis for each domain based on the Phase A Vision.

While listed sequentially, B, C, and D can be executed in any order (e.g., data-driven architecture starts with C) and are heavily iterated.

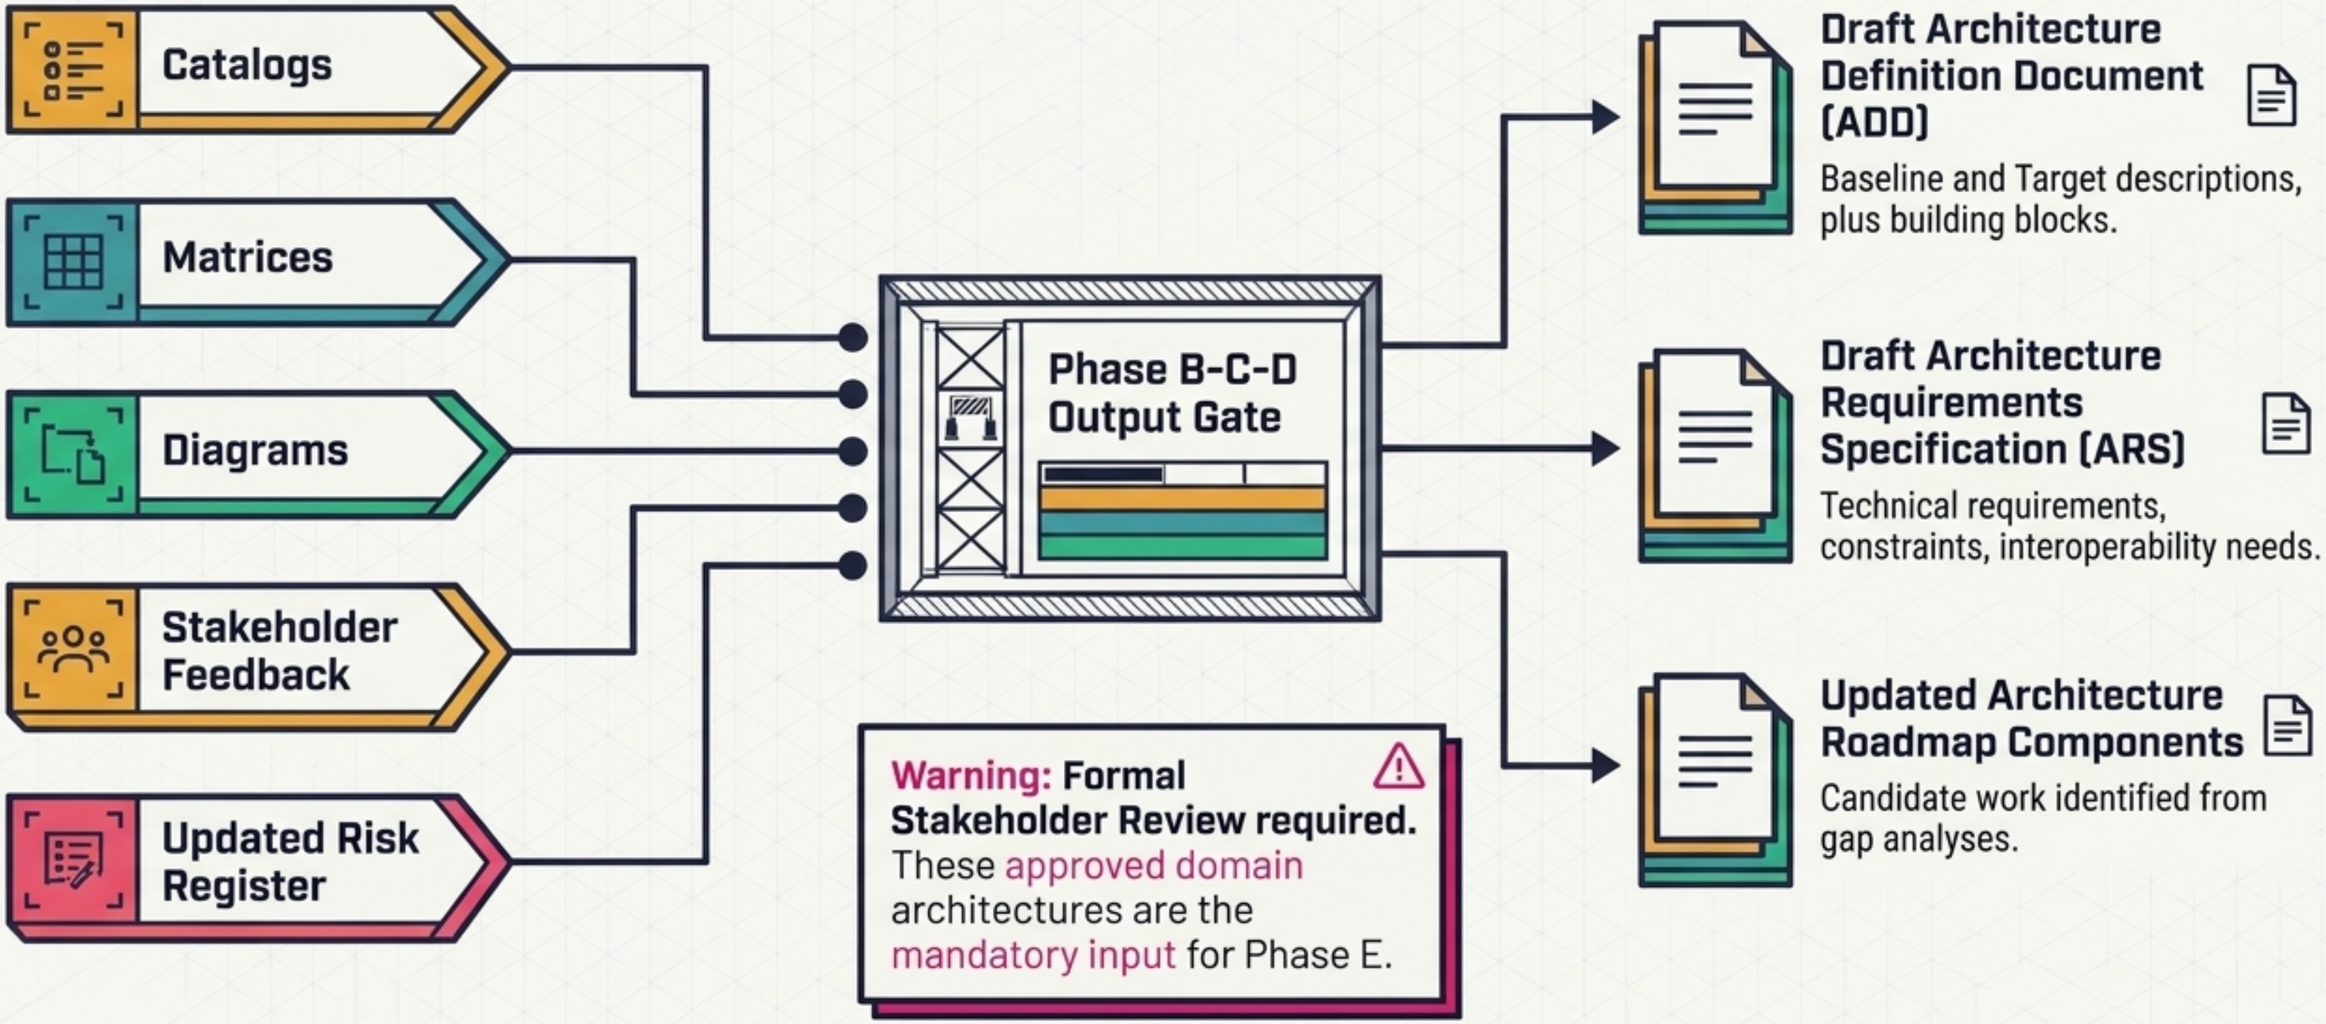

Gemini Notebook

Domain Diagnostics Matrix

Domain	Key Content	Typical Artifacts	Security Focus
Business (Phase B)	Organization structure, capabilities, value streams, roles.	Capability models, process documentation.	Critical asset ID, segregation of duties, access rights, business continuity.
Data & App (Phase C)	Data lifecycle, entity relationships, app portfolios, APIs, messaging.	App/Data Matrix, Logical Data Diagram, Interface Catalog.	Data classification, encryption, audit logging, authentication, data sovereignty.
Technology (Phase D)	Hardware, cloud services, networks, infrastructure standards.	Technology Standards Catalog, Network Diagrams.	Network security zones, platform hardening, cryptography, disaster recovery.

Gemini Notebook

The Phase B-C-D Output Gate

Gemini Notebook

Phase E: Opportunities & Solutions

Implementation Strategies Matrix

Strategy	Description / Characteristics
Greenfield	High Disruption, High Architectural Simplicity. (Build from scratch)
Revolutionary (Big Bang)	Max Risk, Fast Time-to-Target. (Replace everything at once)
Evolutionary / Incremental	Lower Risk, Steady Value. (Transition through intermediate states)
Phased	Controlled Risk. (Groups of changes in planned releases)
Quick Win	Lowest Complexity, Immediate ROI. (Opportunistic early value)

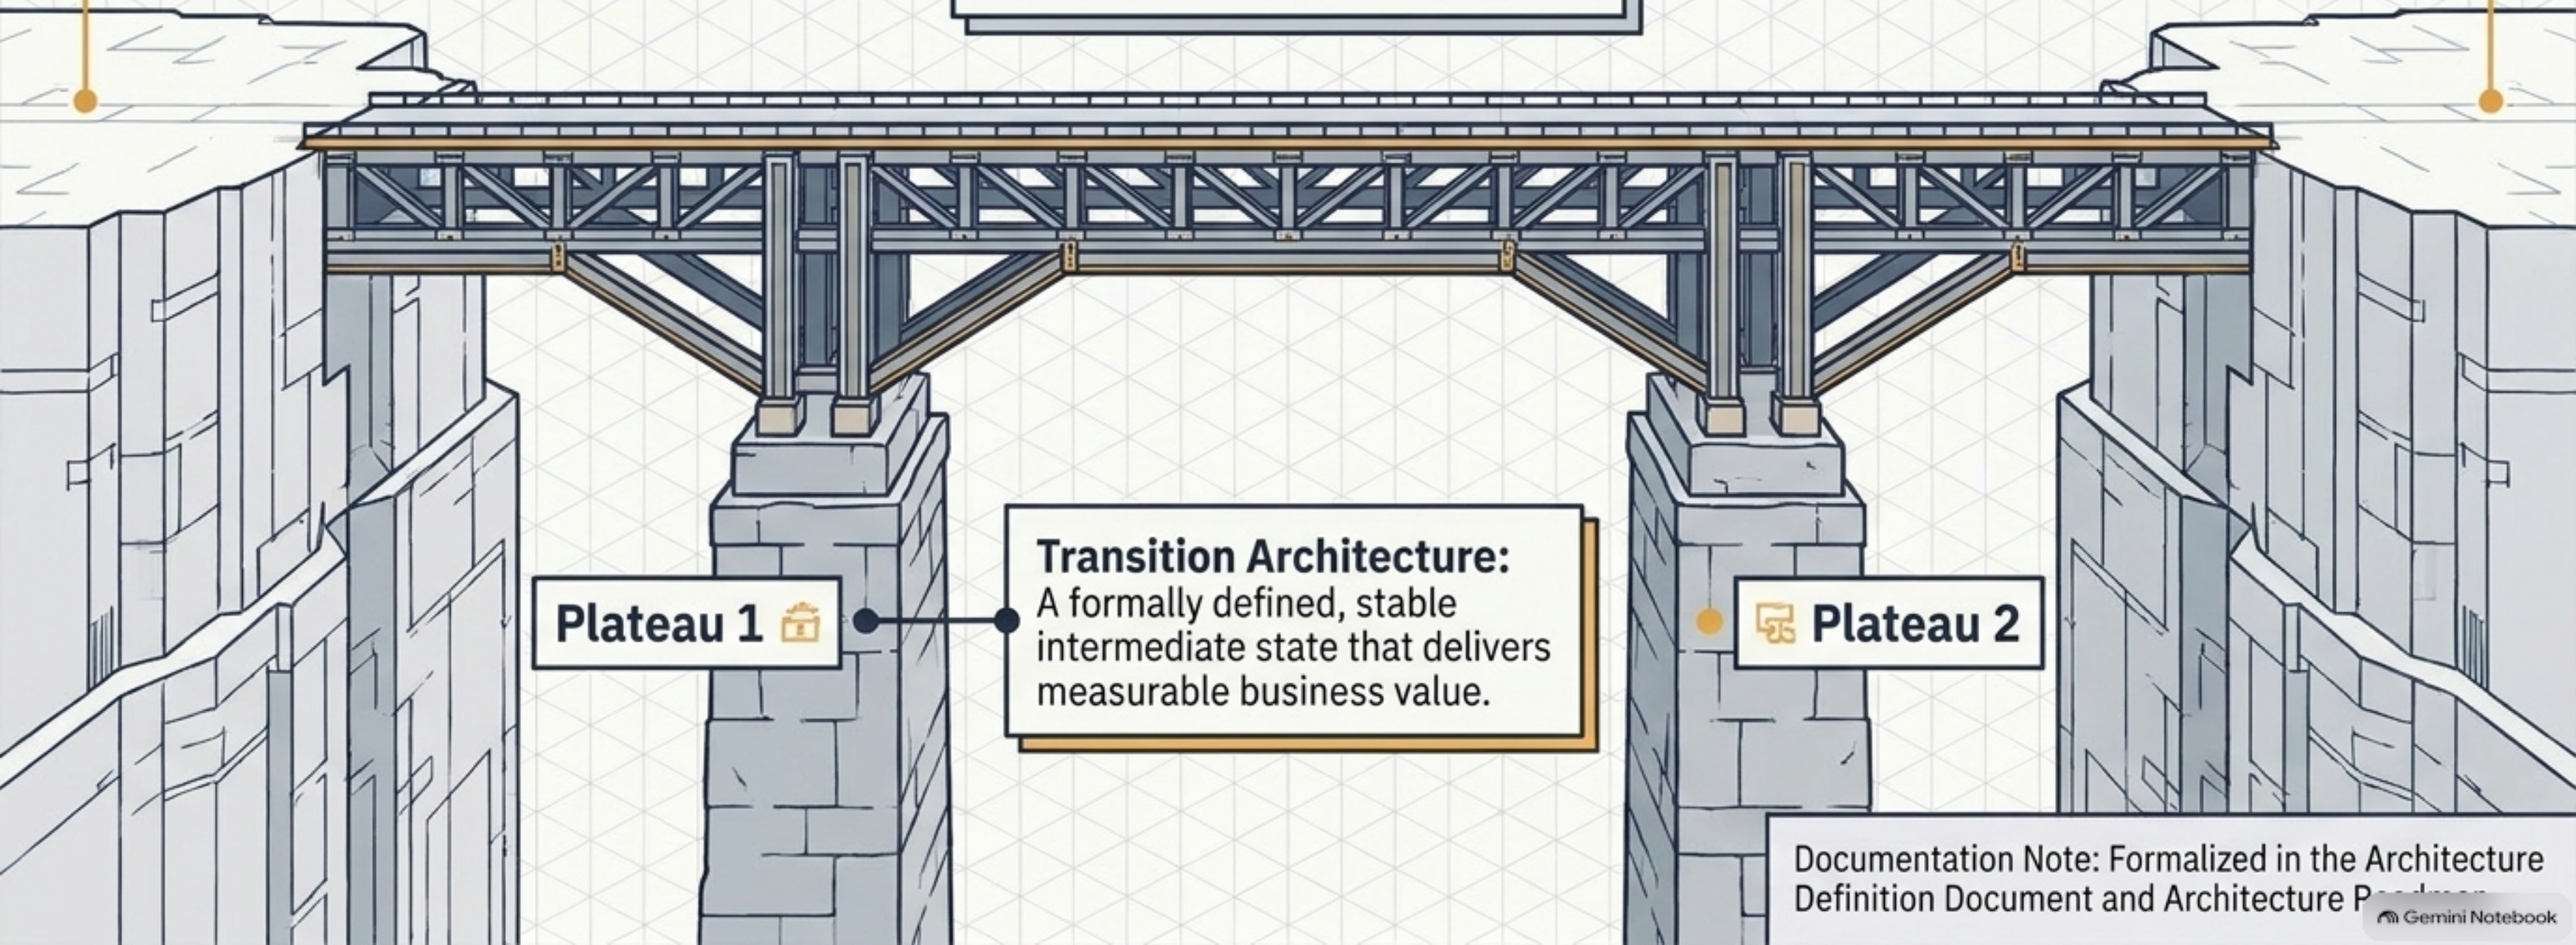

Gemini Notebook

Building the Transition Architecture Bridge

Baseline
(Current State)

When is it needed?
When the Target is too large, risky, or constrained by funding/capacity to deliver in one single jump.

Target
(Future State)

Plateau 1

Transition Architecture:
A formally defined, stable intermediate state that delivers measurable business value.

Plateau 2

Documentation Note: Formalized in the Architecture Definition Document and Architecture P

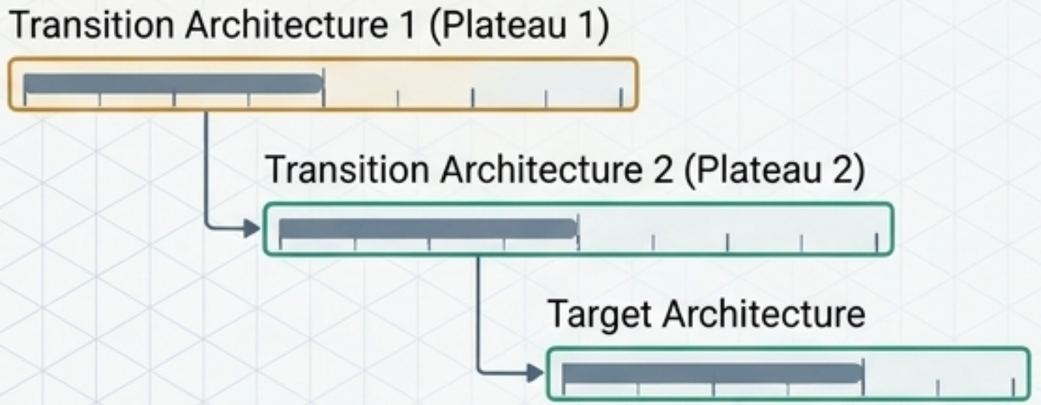

Gemini Notebook

Phase F: Migration Planning & Prioritization

Prioritization Matrix Quadrant

The Architecture Roadmap

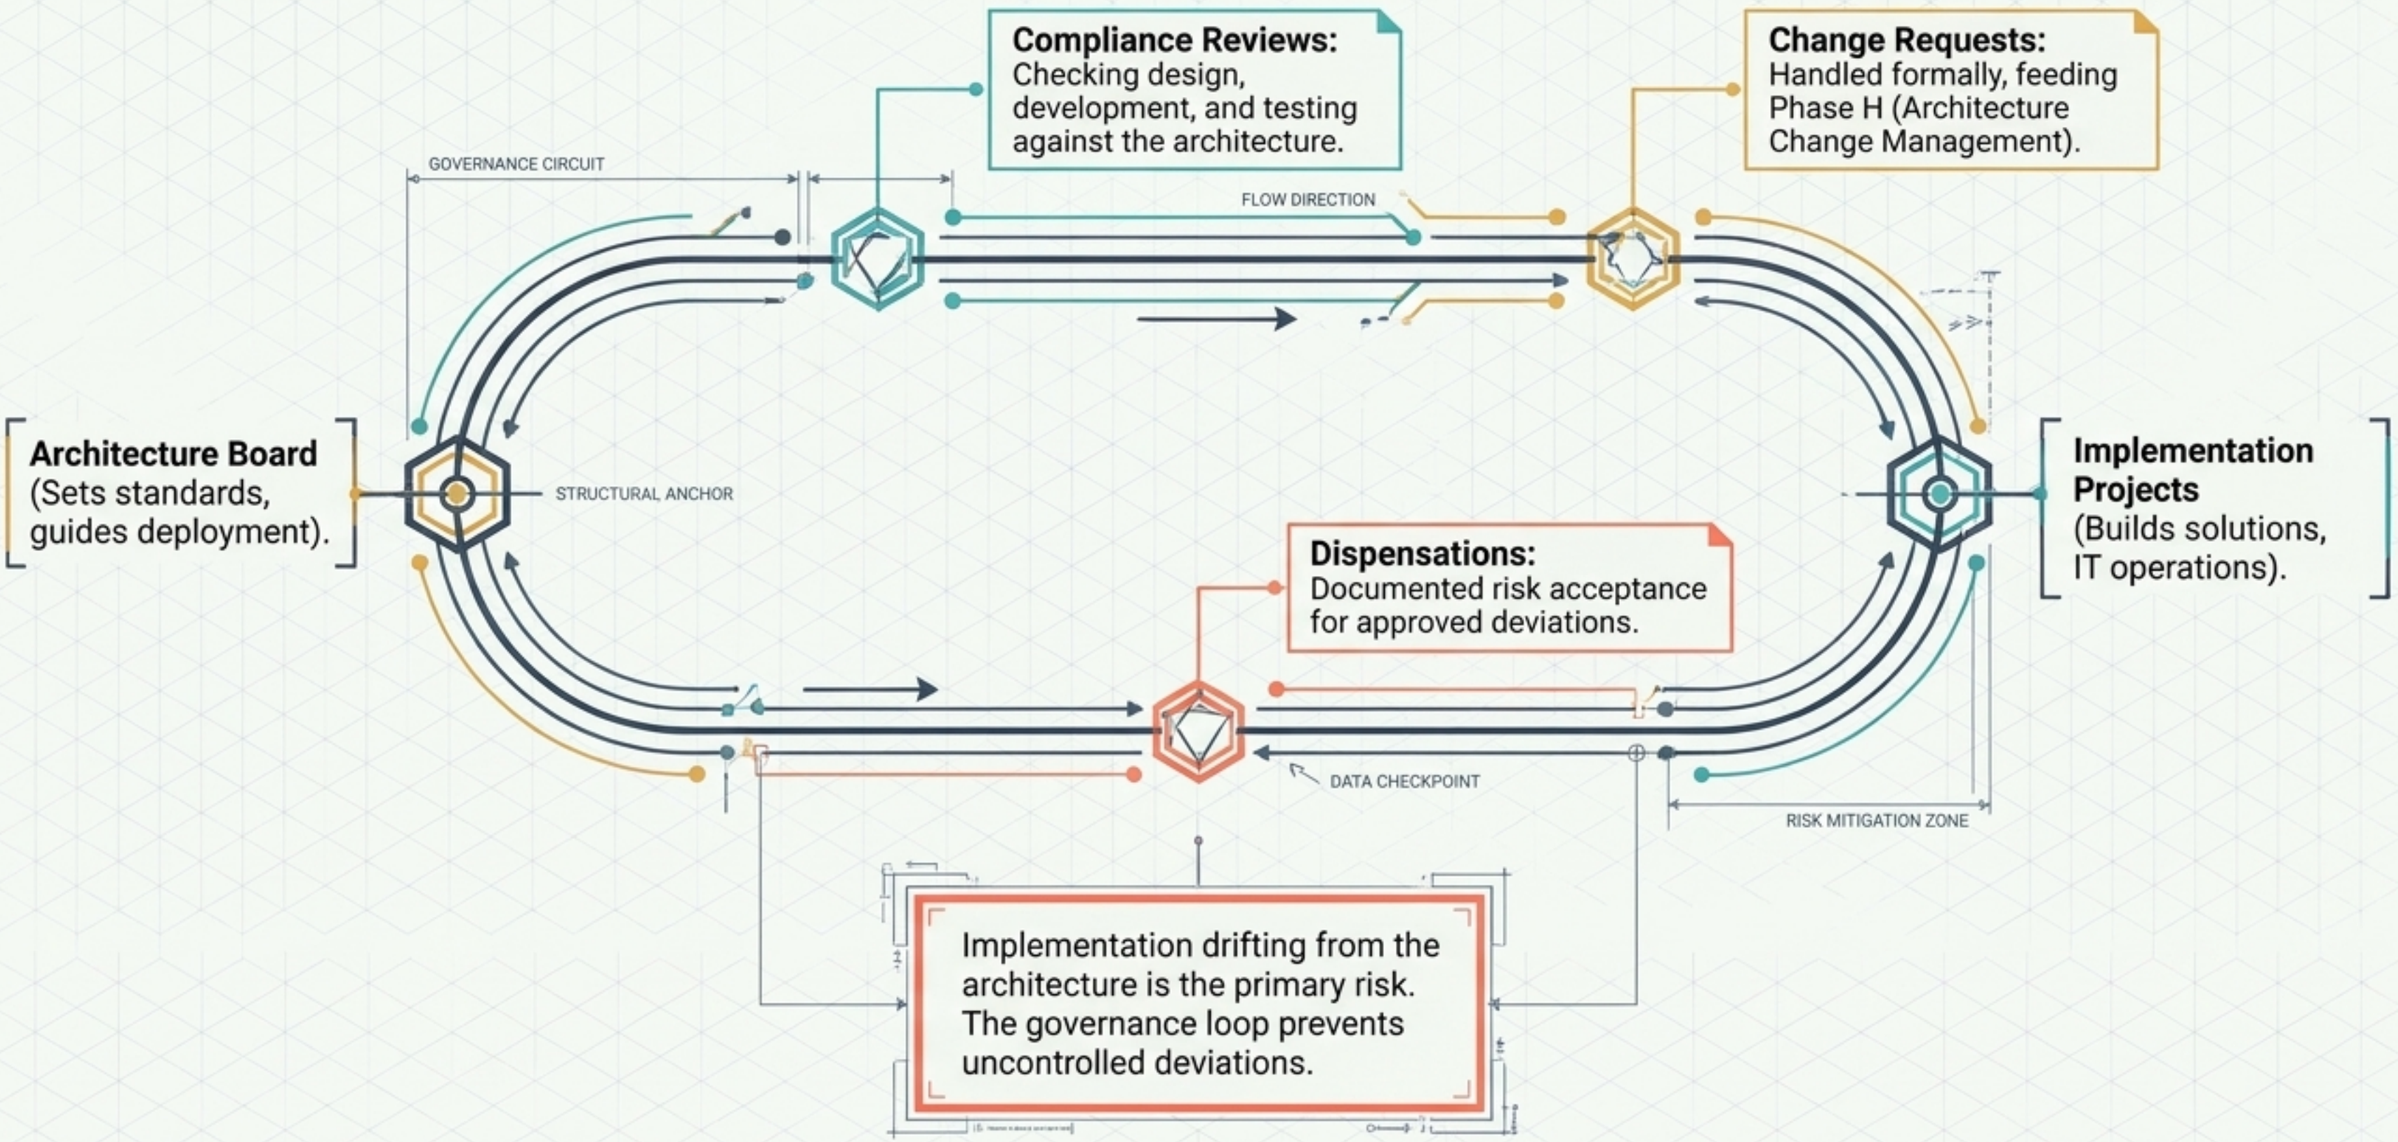

Key Outputs

- Finalized Implementation and Migration Plan (schedule, resources, cost).
- Finalized Architecture Roadmap (time-ordered transition architectures).
- Implementation Governance Model.

Gemini Notebook

Phase G: Implementation Governance

Gemini Notebook

The Architecture Contract (The Binding Handshake)

Scope & Deliverables: What is being built and delivered.

Standards & Principles: Conformance requirements and strategic guardrails.

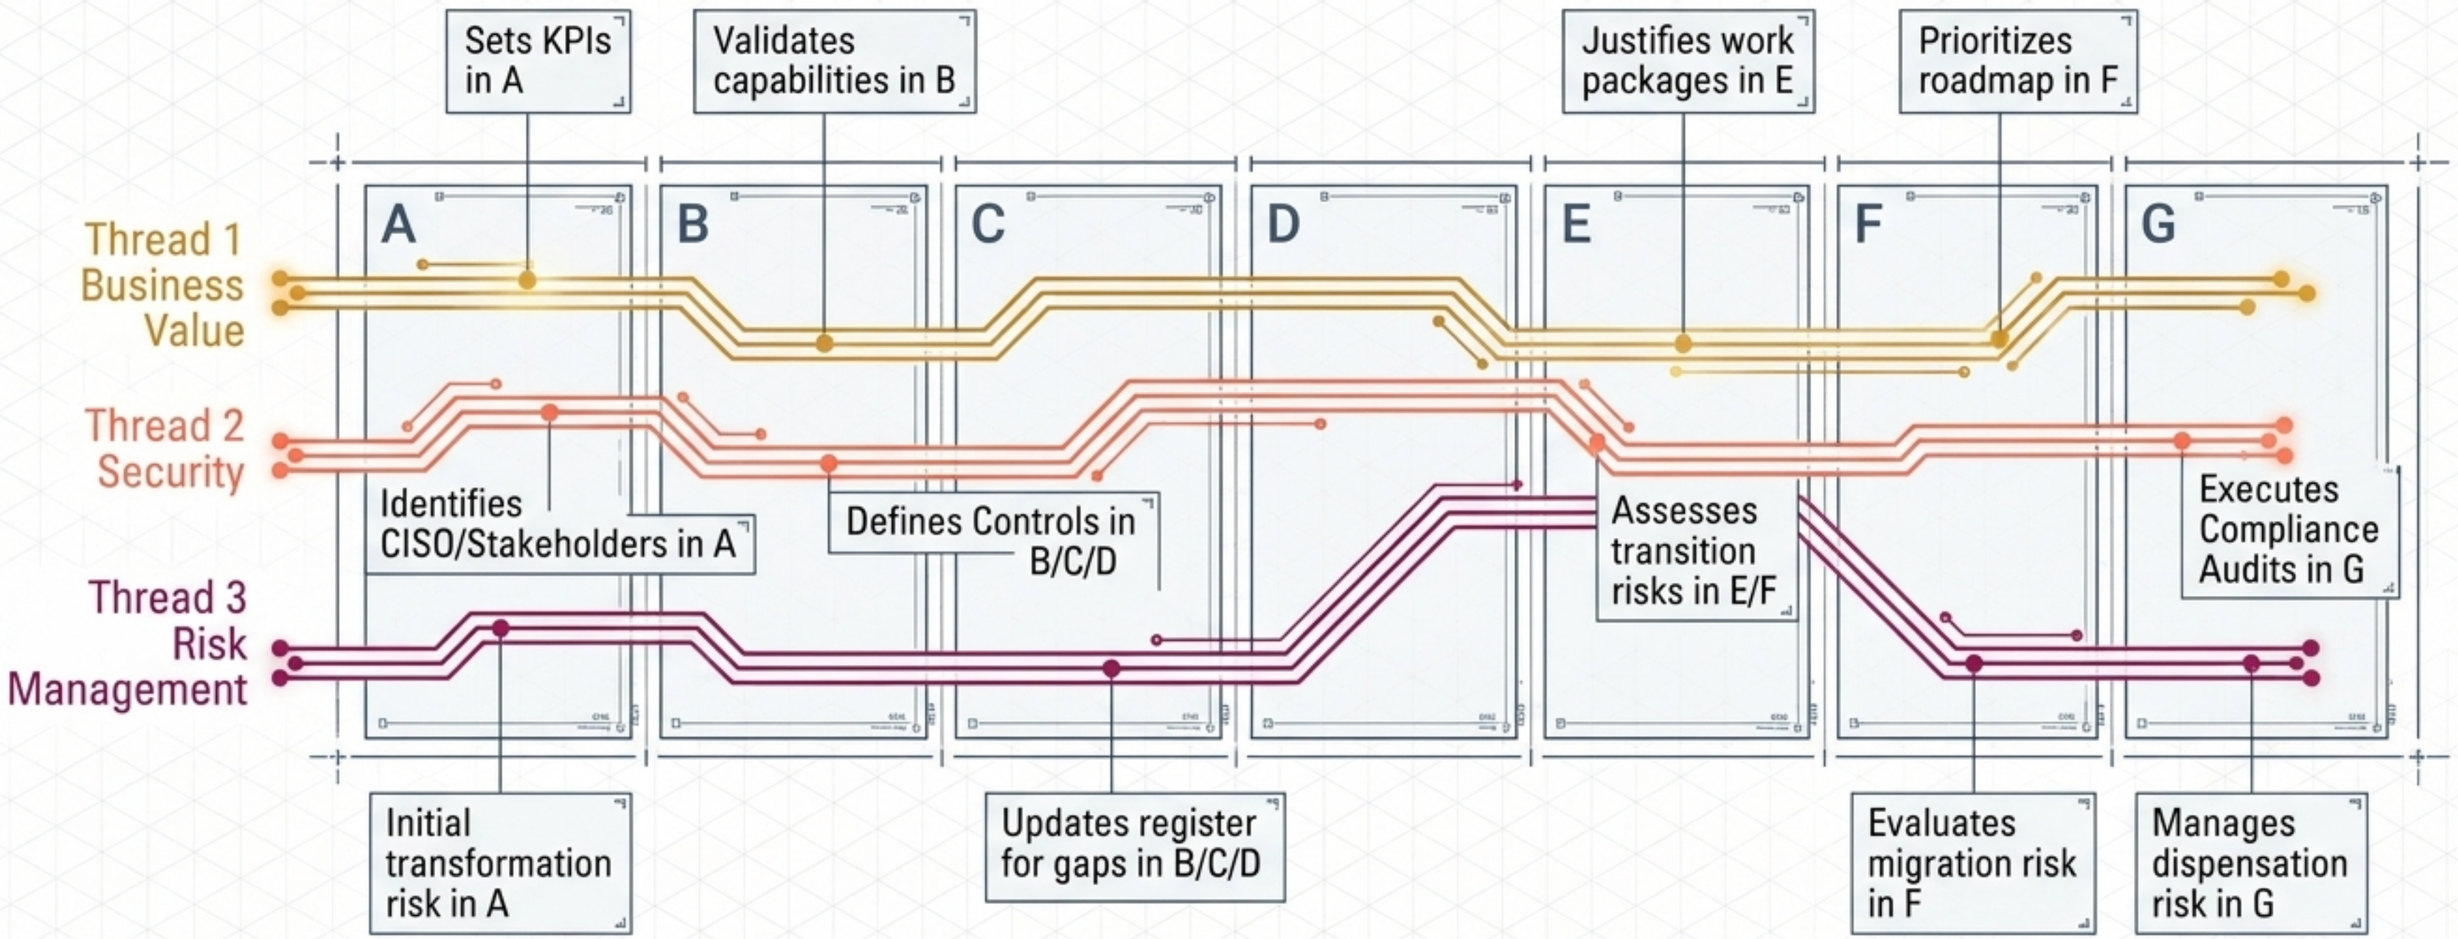

Metrics: Key performance, quality, and security acceptance criteria.

Governance Rules: Time windows, review schedules, and dispensation processes.

Provides a clear, objective basis for compliance reviews. It reduces ambiguity and forces implementers to align with business objectives, not just technical convenience.

Gemini Notebook

Synthesis: The Golden Threads

Gemini Notebook

The TOGAF Quick Reference Matrix

Phase	Focus	Key Outputs
A	Vision, scope, stakeholders	Statement of Architecture Work, Architecture Vision
B	Business Architecture	Draft ADD and ARS (Business)
C	Data & Application Architecture	Draft ADD and ARS (Data, App)
D	Technology Architecture	Draft ADD and ARS (Technology)
E	Opportunities & Solutions	Initial Roadmap, Transition Architectures
F	Migration Planning	Final Roadmap, Implementation & Migration Plan
G	Implementation Governance	Architecture Contract, Compliance Assessments

ADD = Architecture Definition Document | ARS = Architecture Requirements Specification
