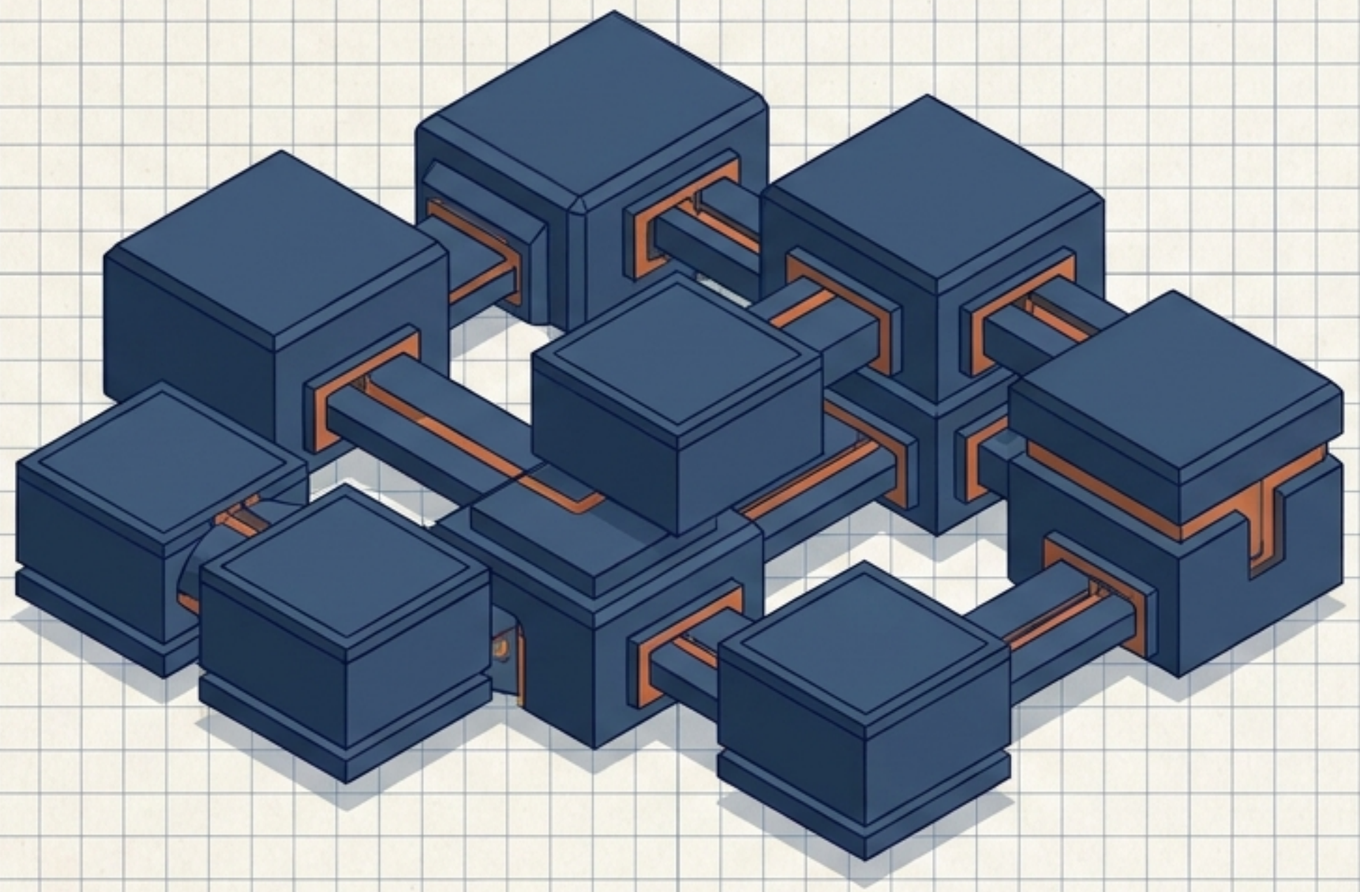
The Operating Manual for Enterprise Architecture

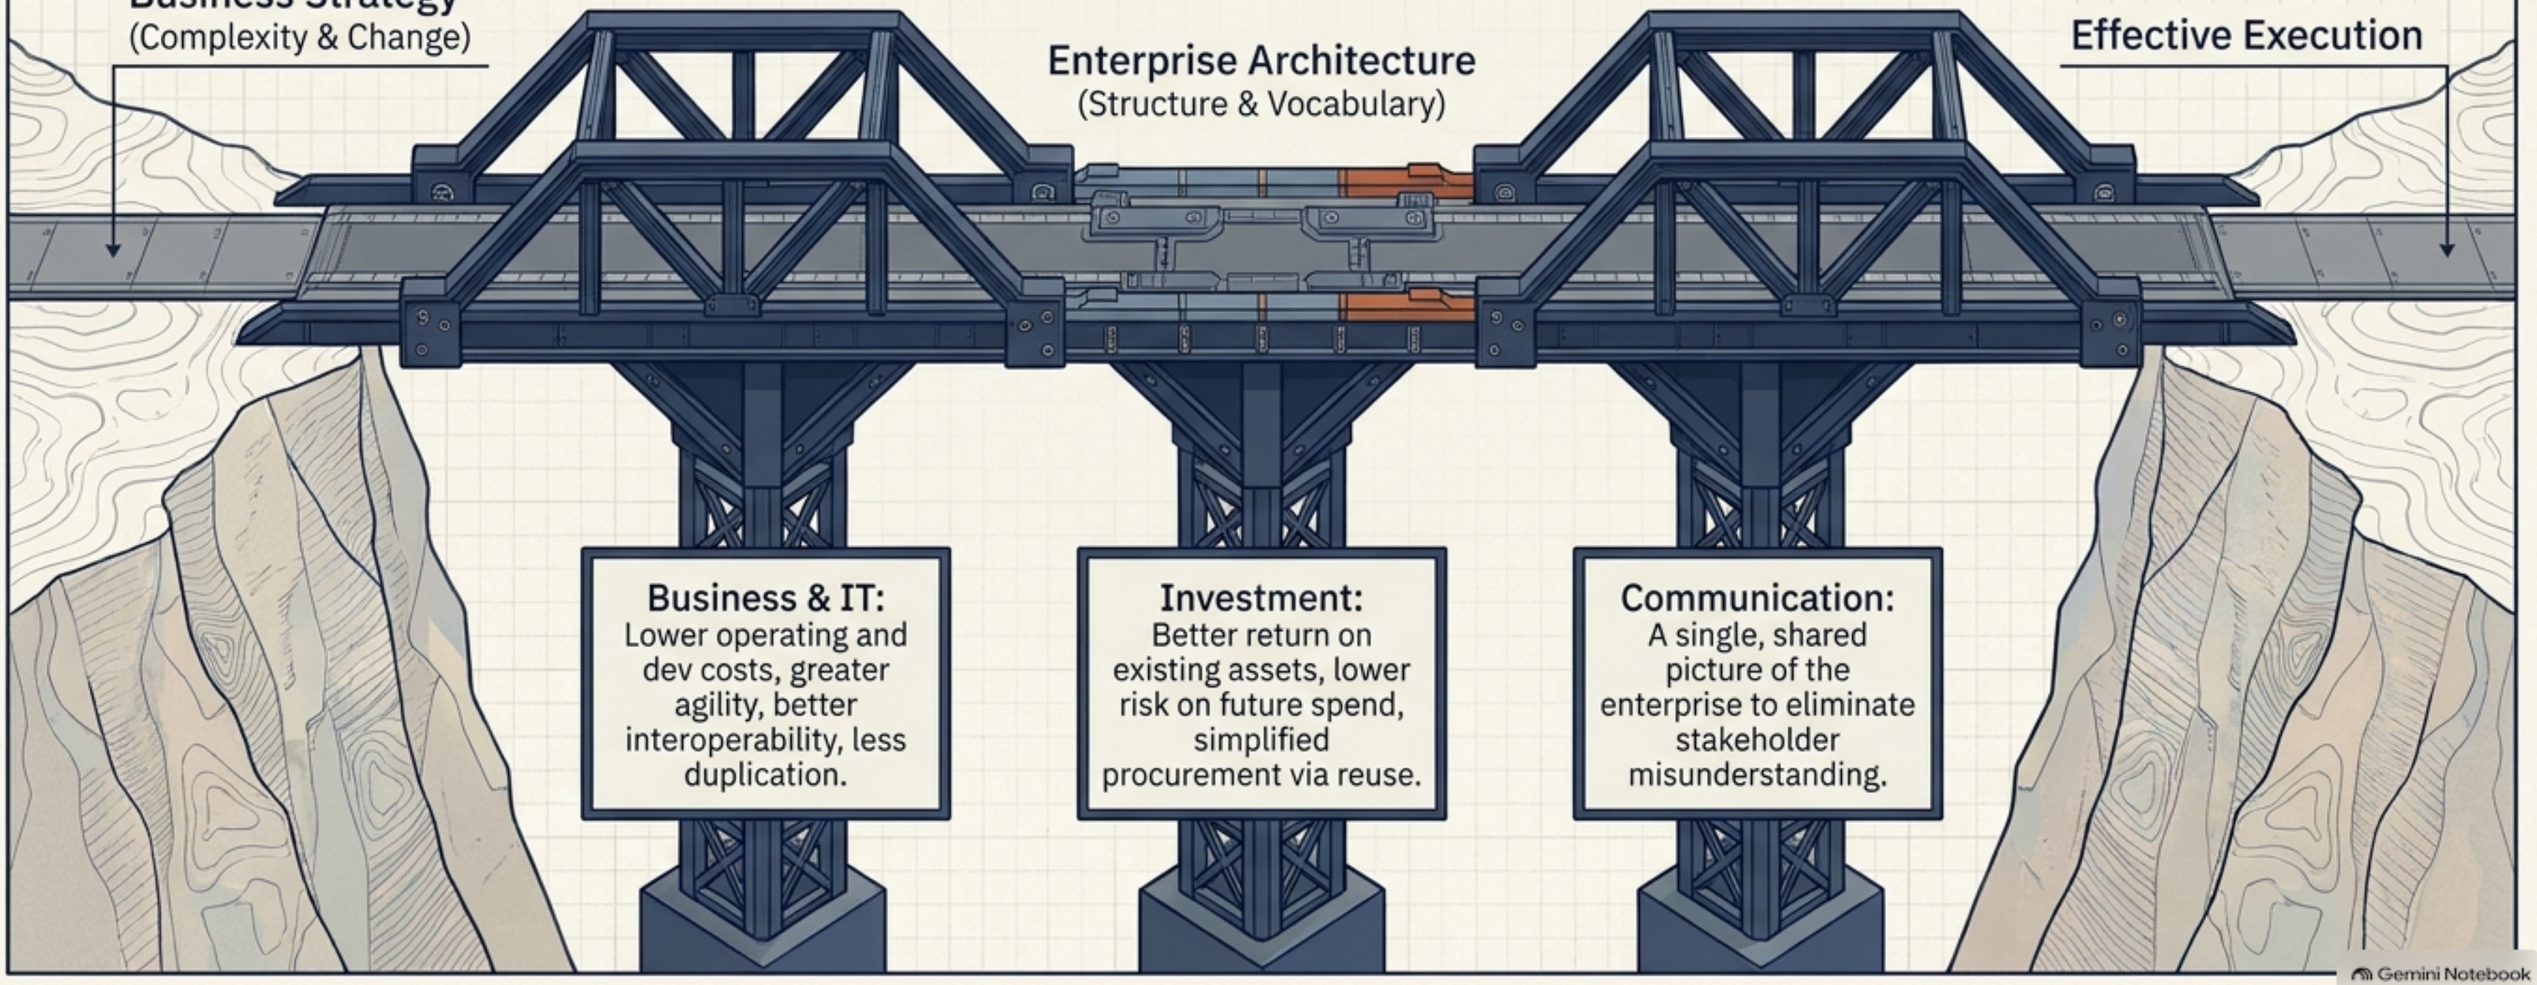
Distilling the TOGAF Standard: The Blueprint, The Engine, and The Guardrails



Gemini Notebook

Translating Business Strategy into Effective Execution

The Enterprise: A collection of organizations that share a common set of goals (a corporation, a division, or an extended ecosystem).



Business & IT:
Lower operating and dev costs, greater agility, better interoperability, less duplication.

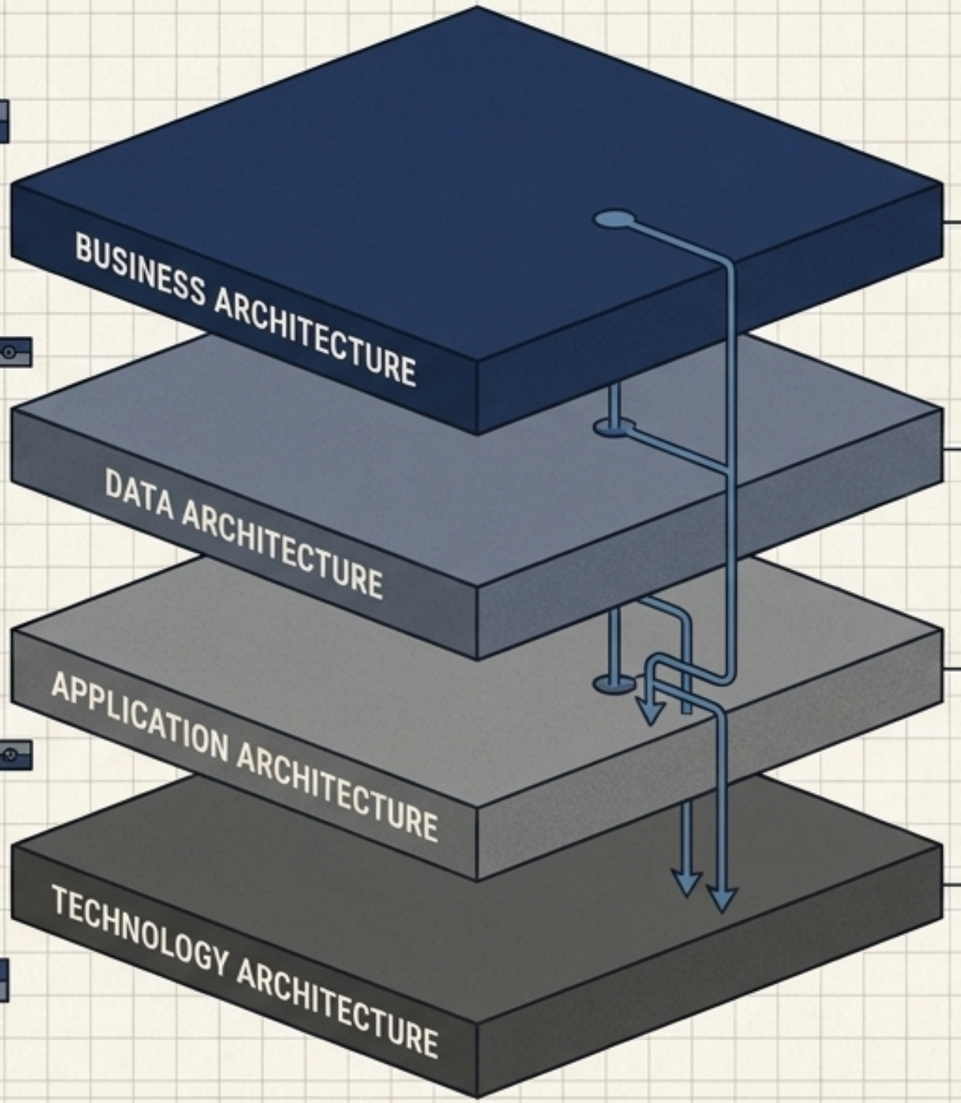
Investment:
Better return on existing assets, lower risk on future spend, simplified procurement via reuse.

Communication:
A single, shared picture of the enterprise to eliminate stakeholder misunderstanding.

Gemini Notebook

The Four Architecture Domains (BDAT)

Information Systems Architecture
(Developed together in ADM Phase C)



Layer Card

Business strategy, governance, organization, and key business processes.

Layer Card

The structure of the organization's logical and physical data assets and management resources.

Layer Card

A blueprint for individual deployed applications, their interactions, and relationship to core processes.

Layer Card

The software and hardware capabilities (infrastructure, networks, middleware) needed to support the above.

Gemini Notebook

The Lexicon: Disambiguating The Confusables

Perspective	**Viewpoint**: The template, conventions, and rules for looking at a system.	**View**: The actual resulting representation for a specific system.
Motivation	**Stakeholder**: A person or group with an interest in the system.	**Concern**: What they actually care about (e.g., security, cost).
Output	**Artifact**: A single piece of architectural description (catalog, matrix, diagram).	**Deliverable**: A formally agreed package, often containing multiple artifacts, signed off by stakeholders.
States	**Baseline**: The architecture as it exists now (As-Is).	**Transition**: Significant intermediate steps. / **Target**: The desired future state (To-Be).

Gemini Notebook

Architecture Scope: Framing the Landscape and Abstraction

Strategic / Conceptual

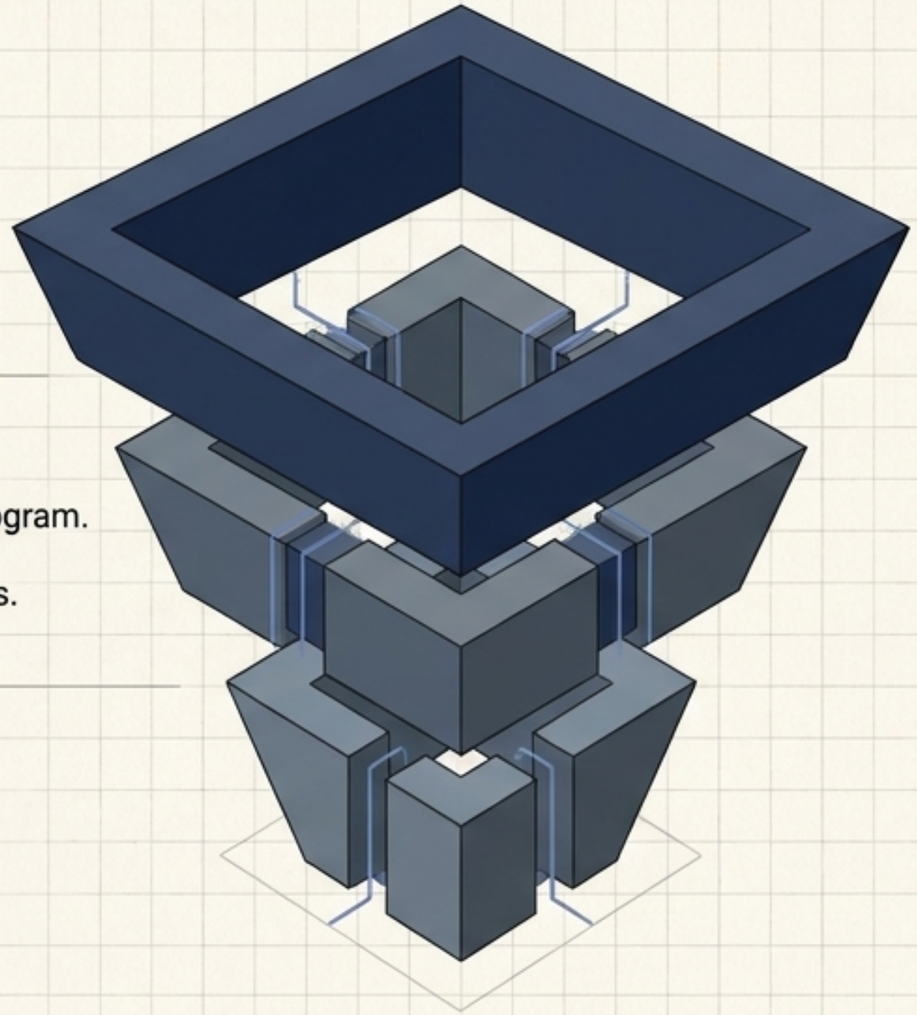
Focus: Broad, long-term, whole enterprise.
Audience: Executives.
Answers: What.

Segment / Logical

Focus: Operating-level view of a portfolio or program.
Audience: Designers. **Answers:**
Structure and behavior independent of products.

Capability / Physical

Focus: Detailed, short-term project increments.
Audience: Engineers.
Answers: How (concrete implementation).



The 4 Dimensions of Scope

1. Breadth
(Enterprise focus)

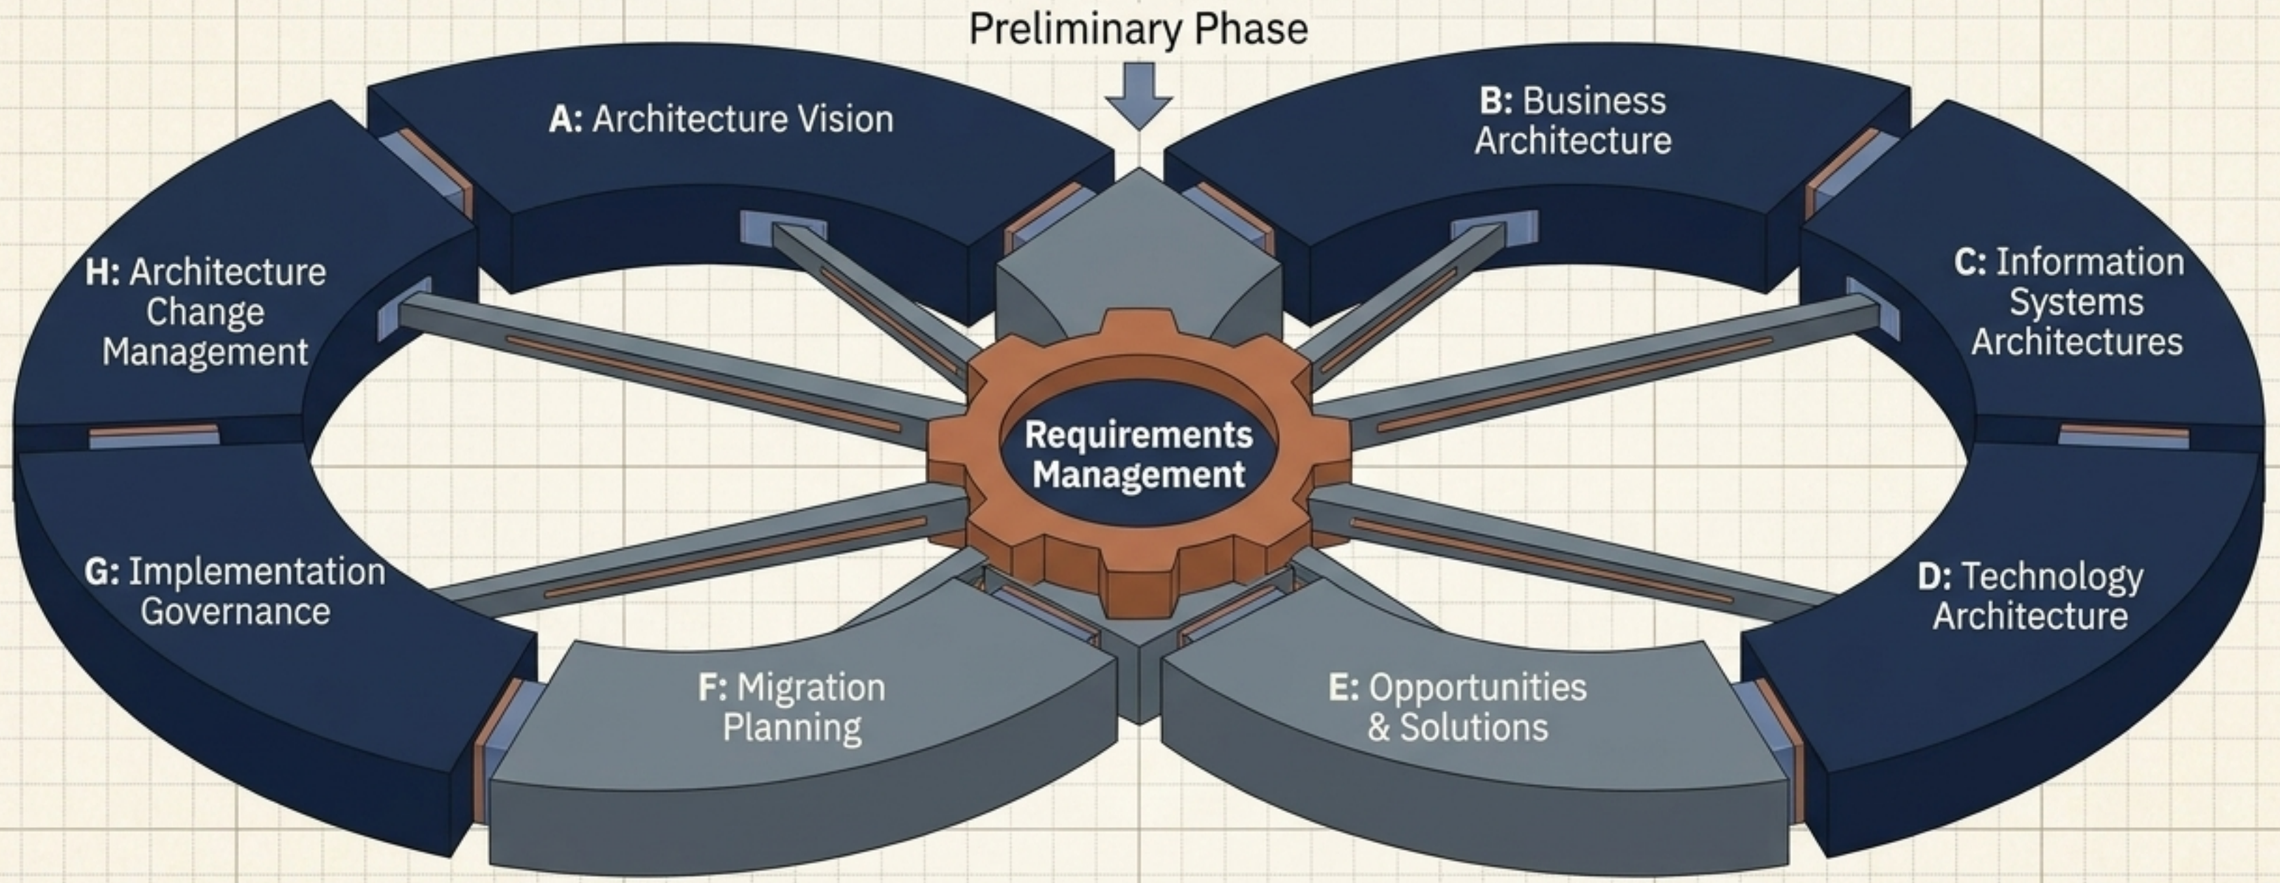
2. Depth
(Detail level)

3. Time Period
(Horizon)

4. Domains
(BDAT)

Gemini Notebook

The ADM Engine: The Architecture Development Method



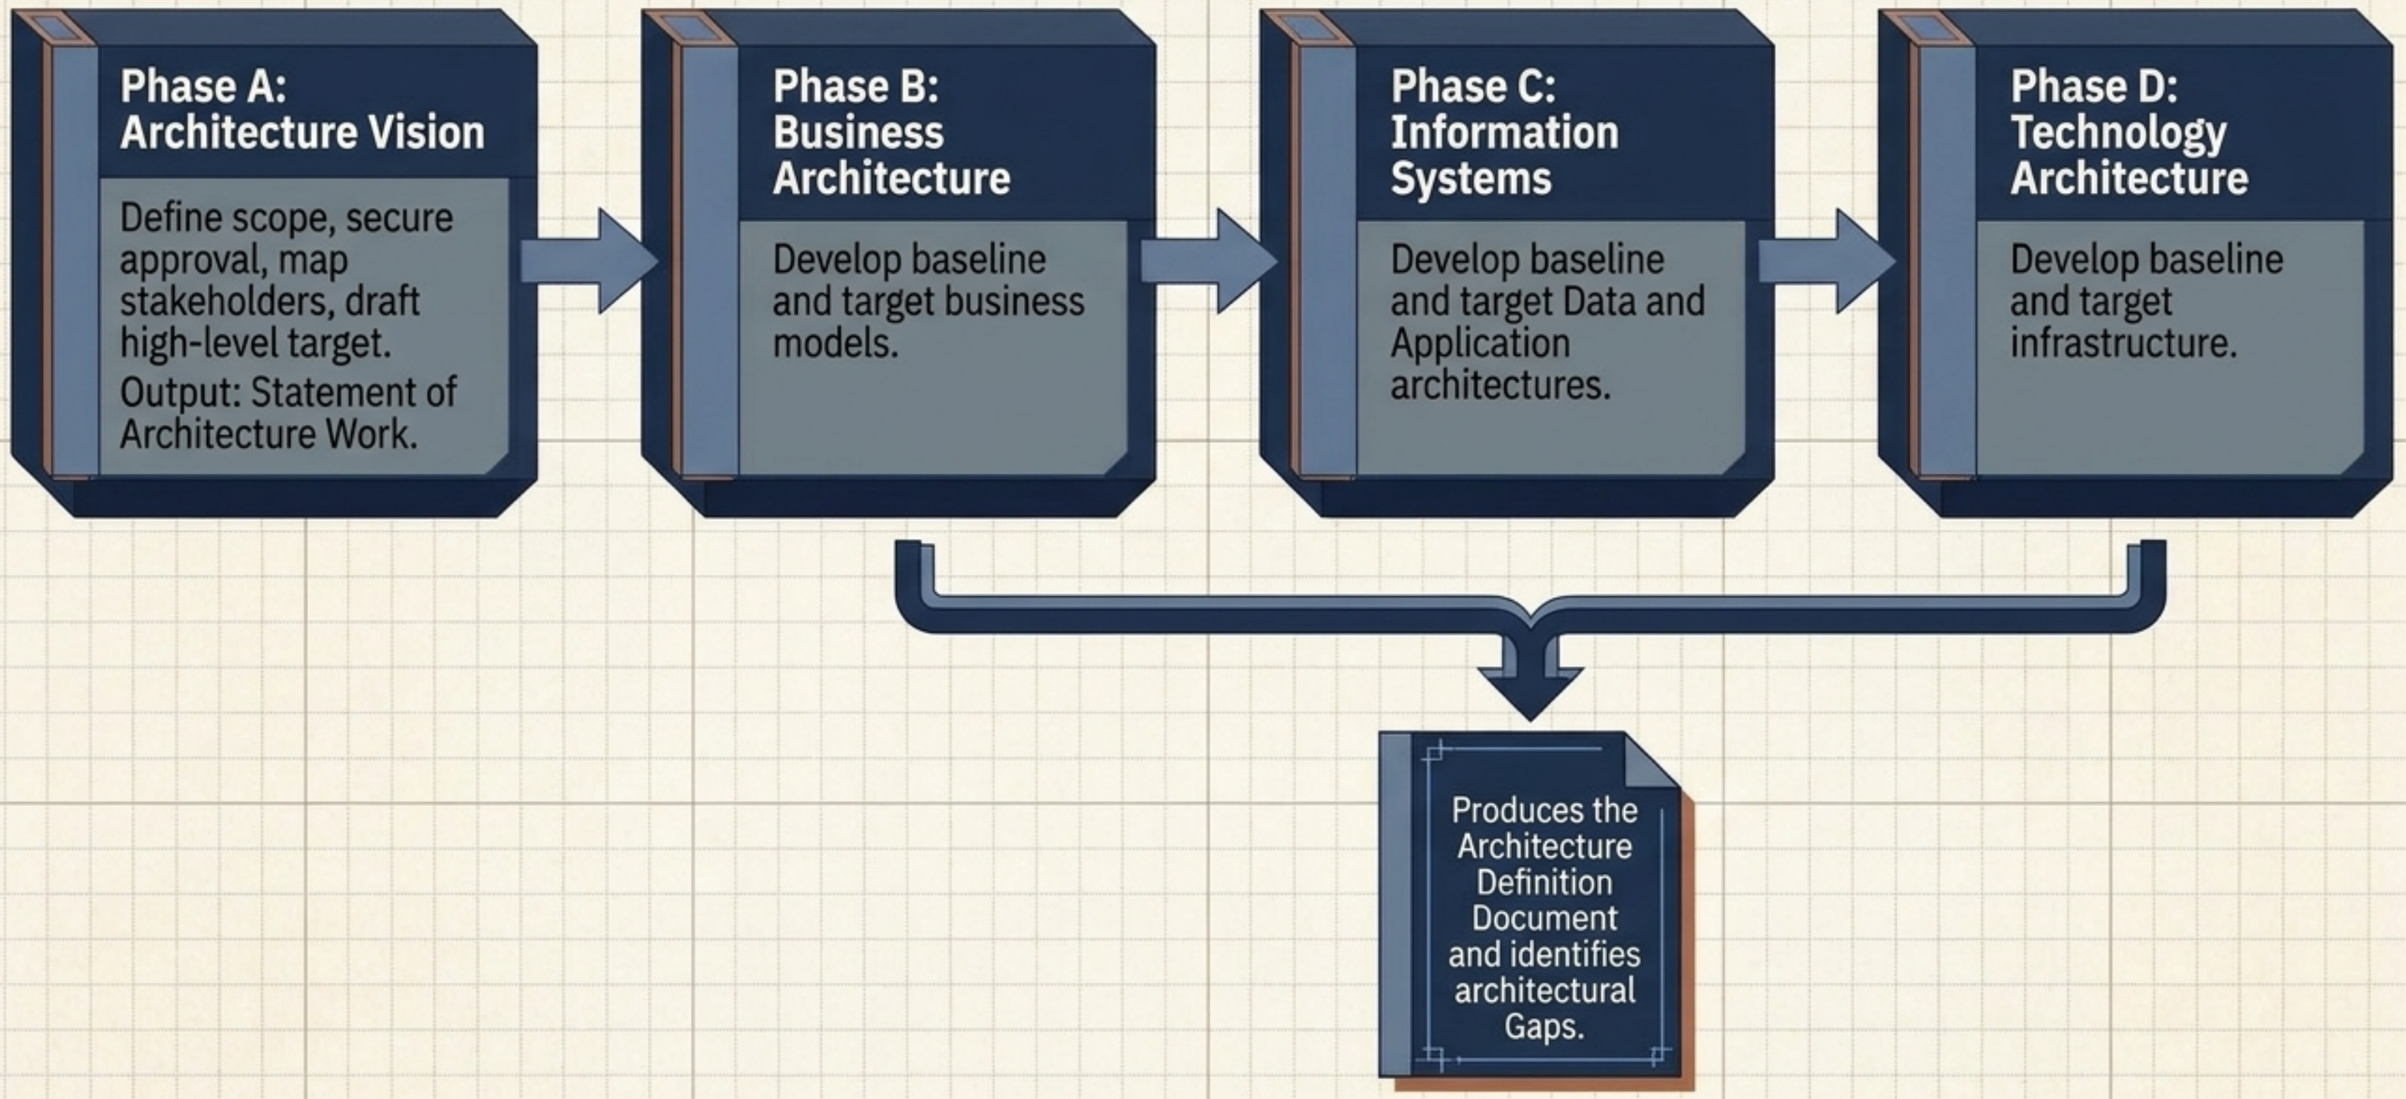
Deliverable Status Evolution

Draft: Actively being developed and reviewed; subject to change.

Approved: Formally signed off by stakeholders; a stable baseline for later phases.

Gemini Notebook

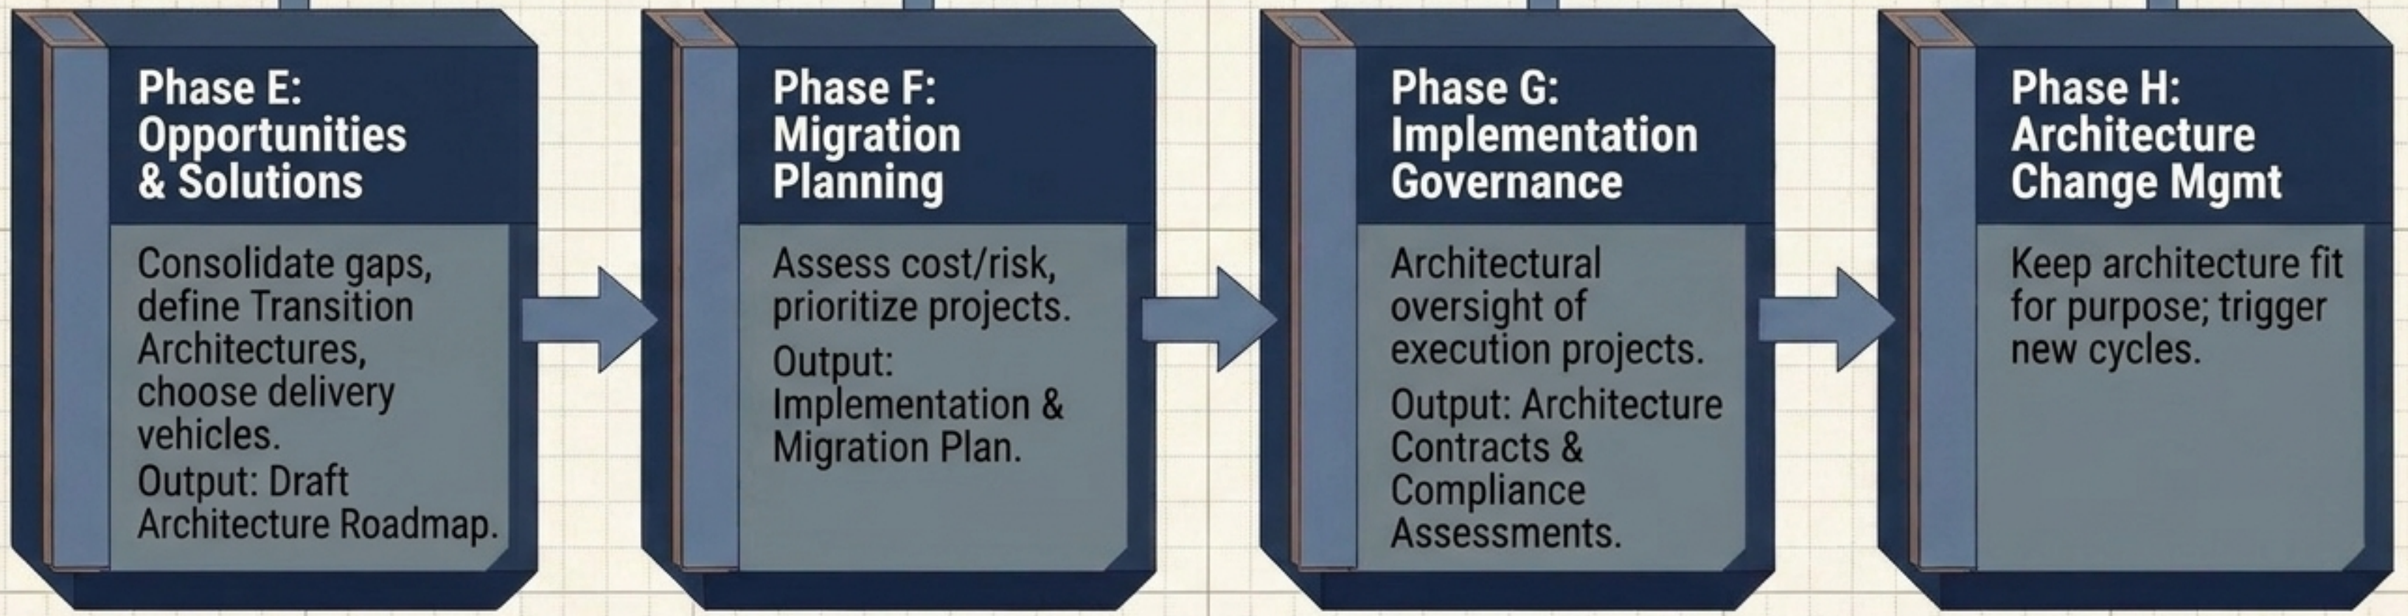
Designing the Target: ADM Phases A through D



Gemini Notebook

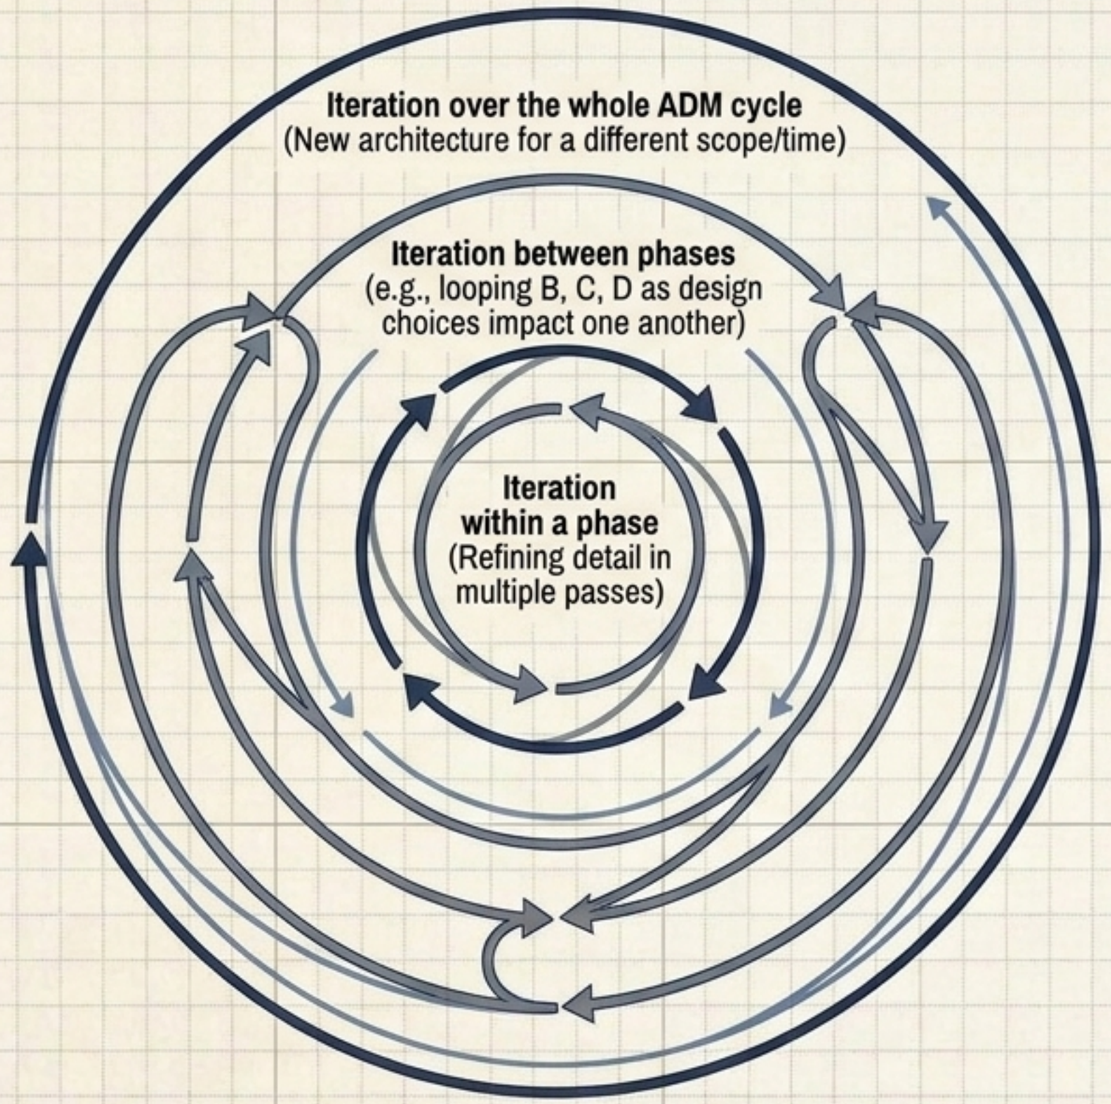
Executing the Change: ADM Phases E through H

Requirements Management continuously feeds in and out of all these phases.



Gemini Notebook

The Iterative & Agile Enterprise



Enterprise Architecture Provides:	Agile Delivery Provides:
Direction, guardrails, principles, and shared assets (The Architecture Roadmap).	Short, fast increments of value (Epics and Sprints executing the Roadmap).

Gemini Notebook

The ADM Techniques Toolkit

Architecture Principles

Rules guiding decisions. Built on 4 parts: Name, Statement, Rationale, Implications.

Business Scenarios

Used in Phase A to derive requirements from real-world problems and environments, not assumptions.

Gap Analysis

Matrix comparing Baseline (As-Is) to Target (To-Be) to find what to eliminate, develop, or procure.

Interoperability

Defines how systems share information and services (from unstructured data to seamless sharing).

Readiness Assessment

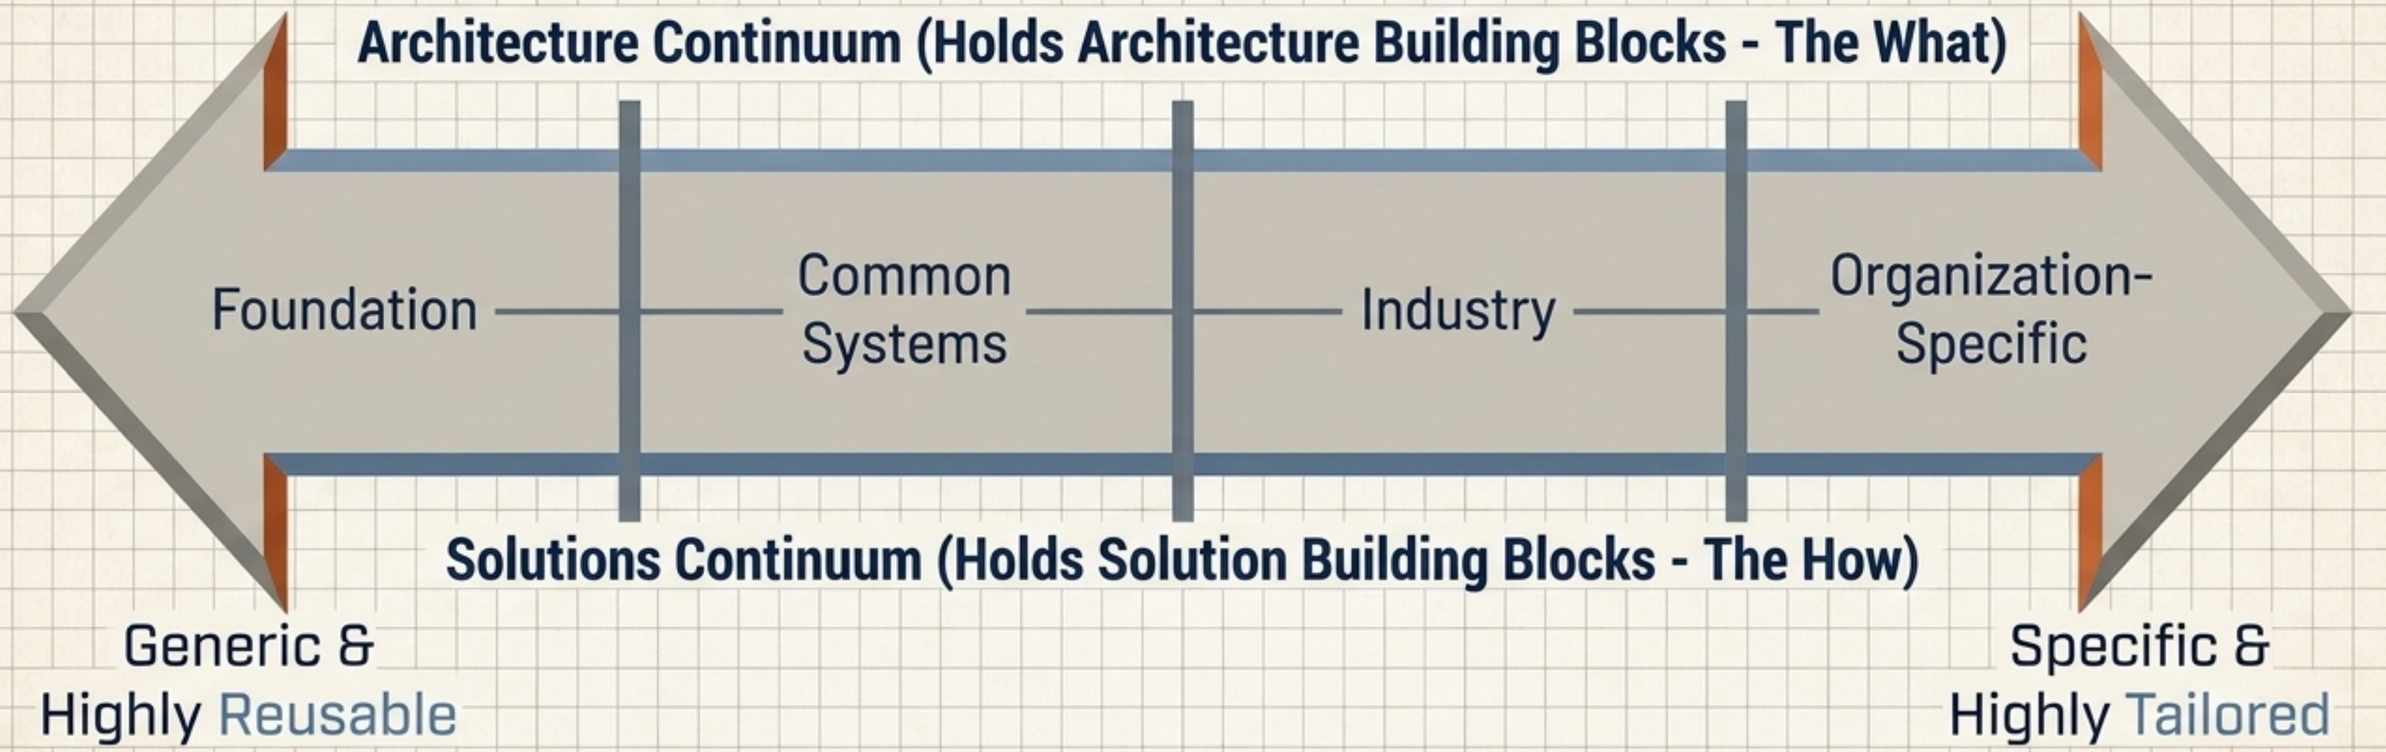
Judges the organization's vision, desire, and ability to accept change. Rates factors and defines actions.

Risk Management

Classifies risk by effect and frequency. Assesses Initial Risk (before mitigation) and Residual Risk (after action).

Gemini Notebook

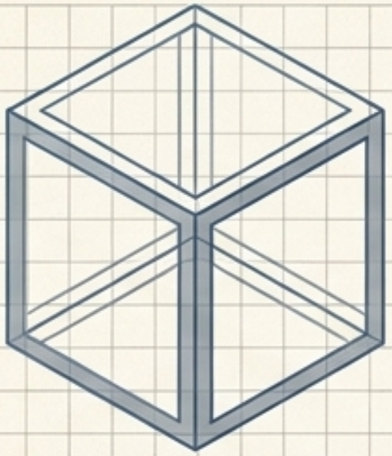
The Enterprise Continuum: Evolution of Assets

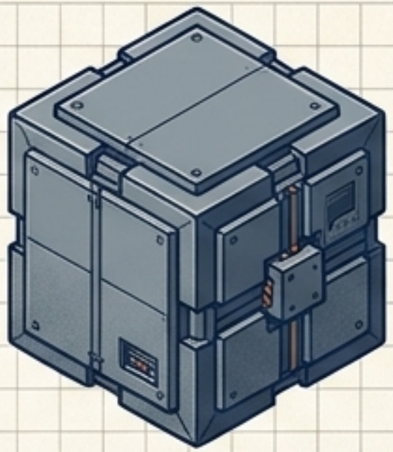


Left-to-right movement increases specificity. Right-to-left movement increases reusability.

Gemini Notebook

Anatomy of Building Blocks (ABB vs. SBB)





Architecture Building Block (ABB)

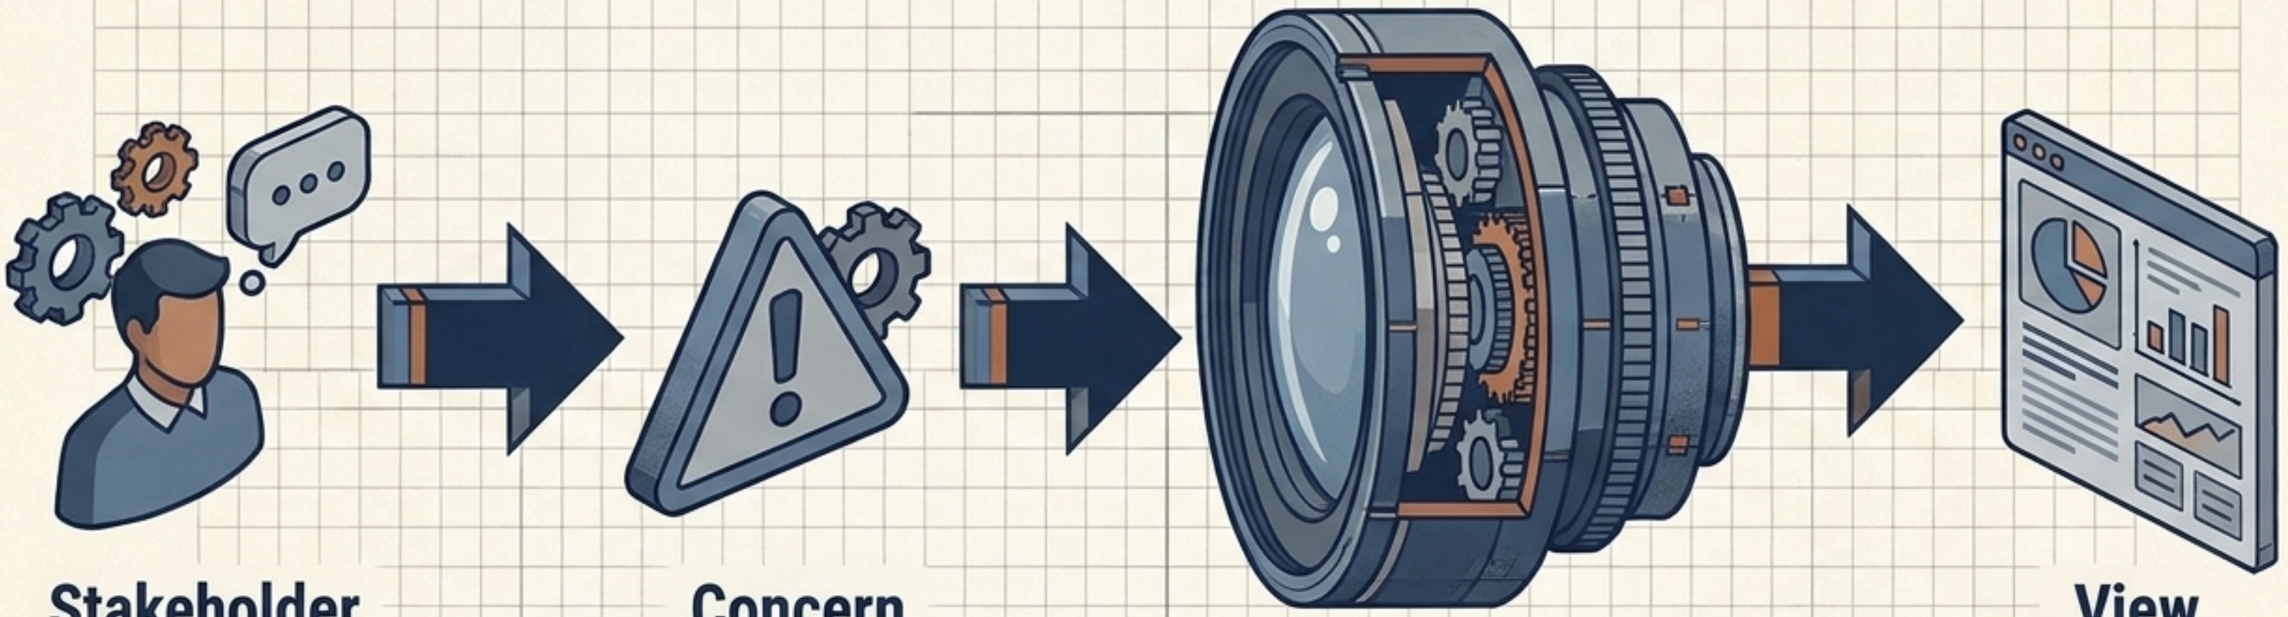
- **Defines:** WHAT is needed (required capabilities and specifications).
- **Nature:** Technology-independent; avoids vendor specifics.
- **Role:** Guides and constrains the development of solutions.
- **Location:** Lives in the Architecture Continuum.

Solution Building Block (SBB)

- **Defines:** HOW it is delivered (the specific products/components).
- **Nature:** Product- or vendor-specific (e.g., AWS, Oracle).
- **Role:** Must conform strictly to the ABB it implements.
- **Location:** Lives in the Solutions Continuum.

Gemini Notebook

The Content Framework: Tailoring the Perspective



Stakeholder
Who is looking?
(e.g., Exec Sponsor)

Concern
What do they care about?
(e.g., Risk, Cost)

Viewpoint
The rules and templates used to frame the data.

View
The final representation the stakeholder actually reads.

Sequence: Identify Stakeholders -> Capture Concerns -> Select Viewpoints -> Produce Views (Starts in Phase A).

Gemini Notebook

Architecture Governance & Compliance

The Architecture Board: A cross-organizational body accountable for governance, resolving conflicts, and approving justified exceptions (dispensations).

Architecture Contracts: Two types.

With Dev Partners:
How projects will implement the design.

With Business Users:
Agreement on deliverables and fitness for purpose.

The Compliance Spectrum

Irrelevant | Consistent | Compliant | Conformant | Fully Conformant | Non-Conformant
